

**CSE3443 : SOFTWARE MAINTENANCE AND EVOLUTION
RUBRICS**

RUBRICS : PLO2 - COGNITIVE SKILLS 10%

CLO1 :Analyze the principles of software maintenance and evolution to solve related problems.

Category	MARKS					Weight
	5	4	3	2	1-0	
Introduction	Provides a very clear overview of software maintenance, clearly states the selected topic and PITA, and explains each group member's subtopic effectively.	Clear explanation of topic and PITA with minor missing details.	Basic introduction but lacks clarity or depth.	Very limited explanation of topic or PITA.	Introduction missing or irrelevant.	1
Technical Paper Review	Excellent summary and critical analysis of both papers including research problems, methodology, findings, strengths and limitations.	Good summary and discussion of papers with minor gaps in analysis.	Adequate summary but limited critique or discussion.	Minimal explanation of the papers.	Papers poorly explained or missing.	3
Technical Paper Integration	Excellent integration of both papers with the selected topic and PITA practices. Clear comparisons and strong analytical discussion.	Good integration with some analysis.	Basic comparison with limited linkage to PITA.	Weak integration with little analysis.	No meaningful integration.	3
Technical Understanding	Demonstrates strong mastery of software maintenance concepts with correct technical terminology and deep analysis.	Good understanding with minor conceptual issues.	Moderate understanding but explanation lacks depth.	Limited understanding of concepts.	Very weak or incorrect understanding.	2
Reflection and Conclusion	Insightful reflection on learning outcomes, challenges, and implications of software maintenance practices. Conclusion clearly summarizes key findings.	Clear reflection and conclusion with minor gaps.	Basic reflection and conclusion.	Very limited reflection.	Missing or irrelevant reflection and conclusion.	1

RUBRICS - PLO9 - PERSONAL SKILLS 10%

CLO2 -Identify suitable maintenance techniques for the given problems through effective self-learning efforts, information seeking and management.

Category	MARKS					Weight
	5	4	3	2	1-0	
Reference Quality & Recency	Exceeds 2 latest papers (<5 years) from highly credible sources (IEEE/ACM).	Provides 2 latest papers (<5 years) from credible sources with good relevance.	Provides 2 papers, but they may be older than 5 years or less credible.	Only 1 relevant/recent paper provided; poor source credibility.	No relevant or recent papers provided; sources are non-academic.	2
Articulation of References	Insightful use of references; perfectly articulated and integrated into the report.	Good use of references; ideas are well-articulated in the writing.	Sufficiently able to articulate references; basic integration into writing.	Weak use of references; writing is disjointed from the cited papers.	References are listed but not used or articulated in the text.	3
Relevance & Use of Information	Information retrieved is perfectly aligned with the maintenance techniques identified.	Good appropriateness and relevance of references to the chosen topic.	References are relevant but the application to the topic is basic.	Weak connection; references don't clearly support the chosen topic.	Information used is irrelevant to software maintenance.	3
Inquisitive Mind & Initiative	Exceptional interest and proactive effort; explores advanced topics and completes reports independently.	Good interest and initiative in exploring the topic and completing the report.	Moderate interest; completes the report with standard effort and minimal prompting.	Low initiative; content is superficial and requires constant supervision.	No interest or initiative; project is incomplete or poorly executed.	2

RUBRICS : PLO11 - Ethics and Professionalism : 10%**CLO3 : Demonstrate ethical collaboration tasks for the given problems related to software maintenance and evolution**

Category	MARKS					Weight
	5	4	3	2	1–0	
Academic Integrity & Similarity	<20% similarity with strong originality and proper citations.	20–30% similarity with acceptable originality and referencing.	>30% similarity with limited originality or flawed citations.	Excessive reliance on AI/external sources; minimal manual refinement.	Evidence of plagiarism or serious academic misconduct.	3
AI Usage Declaration & Ethical Responsibility	Full transparency in AI tools, purpose, and manual modifications made.	Clear declaration of AI use with minor missing details.	Partial declaration; lacks clear explanation of AI-assisted sections.	Vague declaration showing low ethical awareness of AI use.	No declaration, misleading disclosure, or unethical AI use.	2
Peer Collaboration & Professional Conduct	Proactive lead/support; fosters team synergy and professional communication.	Consistent contributor with proactive communication and teamwork.	Completes tasks but requires frequent prompting from peers.	Inconsistent participation hinders team progress or communication.	Fails to engage, disrupts the group, or shows poor professionalism.	3
Accountability, Task Management & Commitment	Full ownership; high-quality work completed ahead of schedule.	Responsible; completes tasks on time with minimal supervision.	Adequate effort but requires reminders, revisions, or monitoring.	Frequent delays; shows weak commitment to assigned work.	Fails responsibilities, severely impacting overall group performance.	2
